# User manual: registering a new webspace.

On our website ccs2.com on the page 'hosting' you can find a registration form.

Fill in this form. After filling in click on the Register button.

WEBSPACE CREATION SUCCESSFUL!

~~~~

### Webinstance for 'testklant' created!
Name: 'testklant'
Password: ~~testklant~~
Domain: 'test.com'
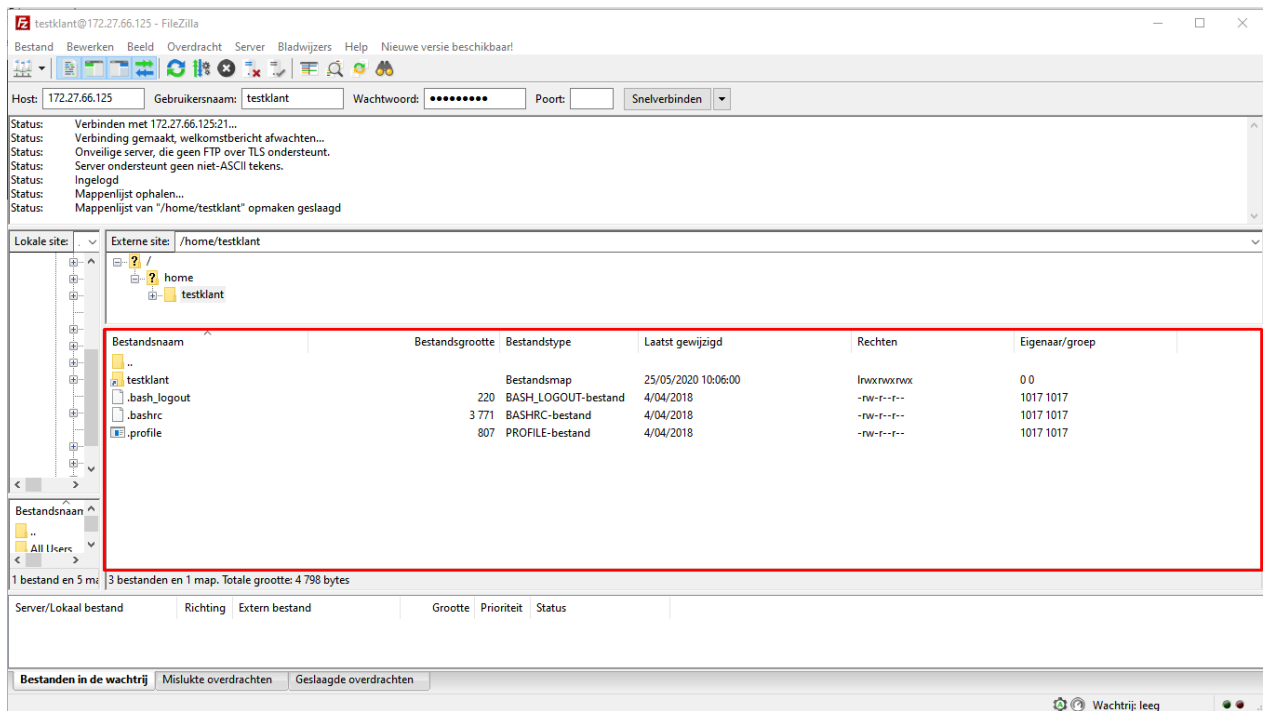

You should get this 'success notification'

Our automated script created and configured your own webspace. As a user you have ftp access to our webserver with above credentials.
you can connect through ftp as follows:

Make use of an ftp client and fill in the correct host IP (screenshot) and your username and password you've registered with.
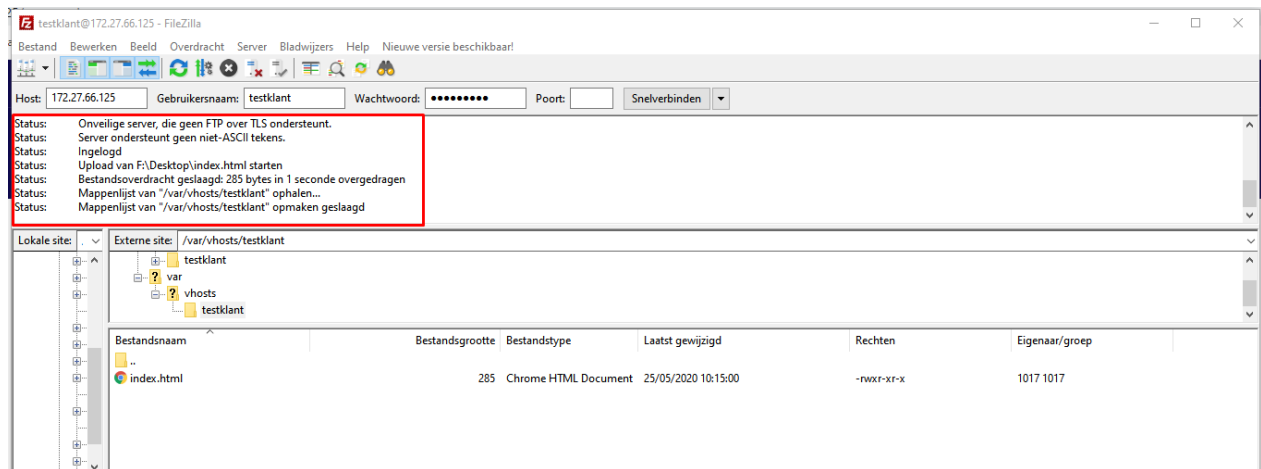

Click on 'connect'

The folder you are in is your private folder. Here can you upload private files for personal use.

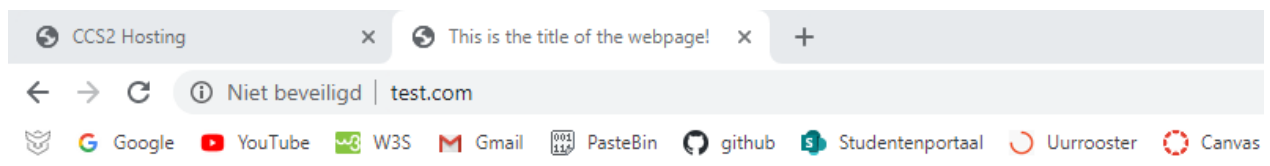

There is also a subfolder with your username. This subfolder is linked to your own webspace directory. If you place any html files or other files in this directory these files are publicly available under your registered domain name on the internet.

Hosting a website

In every webspace there is a default index page. You can delete this file if you want to.
to host your own website just drag the html and css files in the subfolder with your username.

Your website is now available under your registered domain name.
in this test example it is test.com

For a guide to report bugs of sending support tickets please refer to the OpsDocs on:
